

The UP Vest from Blue Soup

The latest offering from The Blue Soup Equipment Company brings you the most advanced and highly effective safety product for all water sports.

The UP Vest is completely manufactured in the UK to European Standards, designed by professional athletes and British engineers.

Blue Soup have broken down the barriers between elite athletes and leisure users by manufacturing a product that is available to all those who participate in water sports because everyone has a right to be safe in their activity of choice.

The UP Vest is an ultra-lightweight 4 way stretch non-neoprene system with 150Newtons of buoyancy. Its ruggedized nature, lightweight suppleness and flexibility means it will not compromise the wearer's range of movement, and continues to offer user protection and safety through the following features:

- UK manufactured machine seam welded inflatable lung
- 2 separate inflation activation heads
- 33g of Co2 contained in each activation (no need for multiple-pulls)
- Oral inflation tube for positive buoyancy regulation
- Manually activated dump valve for quick and easy pressure release
- Firm fitting quick release waist belt
- Sizes S-L / M-L / L-XL / XL-XXL

Blue Soup also provides retail packs of the 33g Co2 refills for the UP Vest (2 Cylinders per pack), and will be producing a range of outer vest designs for each season. These will be available as a separate product line or as a complete system, (pricing available on request).

ITEM	List
UP Vest	\$535.00
Co2 Refill Packs	\$19.03
